## Abstract

I am a convincing abstract...

*Keywords:* key1, key2, key3, ...

DRAFT

I am a very exciting title

## Introduction

We use the awesome apa6 / apa7 package (from Brian D. Beitzel & Daniel A. Weiss) to create a beautiful APA-style manuscript. Let's cite Michel, Dugué, and Busch (2021) to showcase how citation commands are used (also works in parentheses, see Michel et al., 2021). Figure 1 shows an APA figure example.

*Figure 1*

*APA Requires The Title Above The Figure*

*Note.* Here you can add all your notes regarding the figure.

## Study 1

### Methods

**Participants.** Describe your sample here. Below you can find a random equation

$$f = \sqrt{\frac{\eta_p^2}{1 - \eta_p^2}} \quad (1)$$

which I only added to intimidate the reader of the template.

**Material.** Here I will briefly describe the material of the study.

**Apparatus.** VPixx here, Eyelink there...The typical paragraph to skip when you read a paper.

**Stimuli.** Just a description of our typical lines and circles, i.e. the puristic beauty of psychophysics.

Results

Table 1 shows some intimidating formulas in an APA-style table. I deeply hope that there is another (and more straightforward) way to set up a table, because tables in LaTeX are a nightmare...

Table 1

*Just some formulas*

model	formula
intercept model	$f(t) = b_0$
linear model	$f(t) = b_0 + b_1t$

*Note.*  $b_{0,1}$  = beta weights,  $t$  = time.

Just some random text below the table to create the illusion of a real manuscript.  
Nothing important to say here.

Funding

This study is supported by \*\*\*.

Conflict of interest

The authors declare no competing financial interests.

Ethical approval

The study was conducted in accordance with the ethical standards laid down in the World Medical Association Declaration of Helsinki (World Medical Association, 2013).

Author Contributions

Auth1 did whatsoever. Auth2 did something else.
